

Mace Vehicle Safety System – Installation Instructions

Instructions for Installation:

1. Remove items from the box and lay all 3 parts on a flat surface.
2. Take one end of the hose and insert it into the push-fitting located in the cavity of the FIN. Make sure the hose is pushed all the way in. This is required to ensure the hose locks into the fitting. Once connected, tug firmly on the hose to ensure it is locked in.
3. The FIN has strong, magnetic mounts so it will easily attach to the roof of your vehicle. Stick the FIN to the roof of your vehicle, as close to the center as possible.
4. Run the hose into the vehicle, through a door or rear hatch so that it fits without being pinched. If hose is pinched, it will block the flow of the pepper spray. Once you have the FIN and hose installed, blow through the hose to confirm airflow. If the hose is pinched, adjust it until you do get air flow.
5. Run the hose to a comfortable spot near the driver's seat. Push the hose into the connector on the pepper spray canister all the way. Tug firmly on the hose to ensure it is locked in. *****This is a very important step. If the hose is not fully connected, you will spray yourself.*****
6. Place the pepper spray canister in a secure and easily accessible spot so that you may access it if needed. Be sure that the pepper spray canister is in a spot where it will not get damaged in any way. **If you puncture or damage the canister you will end up spraying yourself and anyone else in the vehicle!**

Instructions for use

1. If you need to use your system, **be sure all windows on your vehicle are closed and your heat/air conditioning system is turned off**, so that the pepper spray is not pulled back into your vehicle once deployed.
2. Pull the pin out, push down and hold the yellow trigger for at least 3 seconds. If you feel you still need more deterrent then hold down the yellow trigger again until the canister is empty.

Thank you for purchase. Our product is designed to allow you to travel around with Freedom from Fear. **Important**

information

- This product is not a toy, should never be discharge inside a closed space and never used unless you are in danger and fear for your safety.
- F3 Defense is not responsible for your actions with F3 Defense or its failure to work as intended.
- If you discharge the pepper spray you will need to clean up your car and possible yourself if discharged by accident. Air, soap and lots of water is used for cleanup. Wash, wash, wash.
- If you are sprayed you will feel burning eyes, runny nose, coughing and generally on fire. While very unpleasant it will not kill or permanently damage you in any way. It is just hot peppers at its very basic makeup. Decontaminate yourself or another person by flushing copious amounts of clean water into the eyes and face. Use soap and a fan to soothe the burn. Keep Calm, only time will ease the burning. Wash your clothes separably from other laundry when washing. Normal washing procedures will be fine.
